Lab 6: Fedora Install

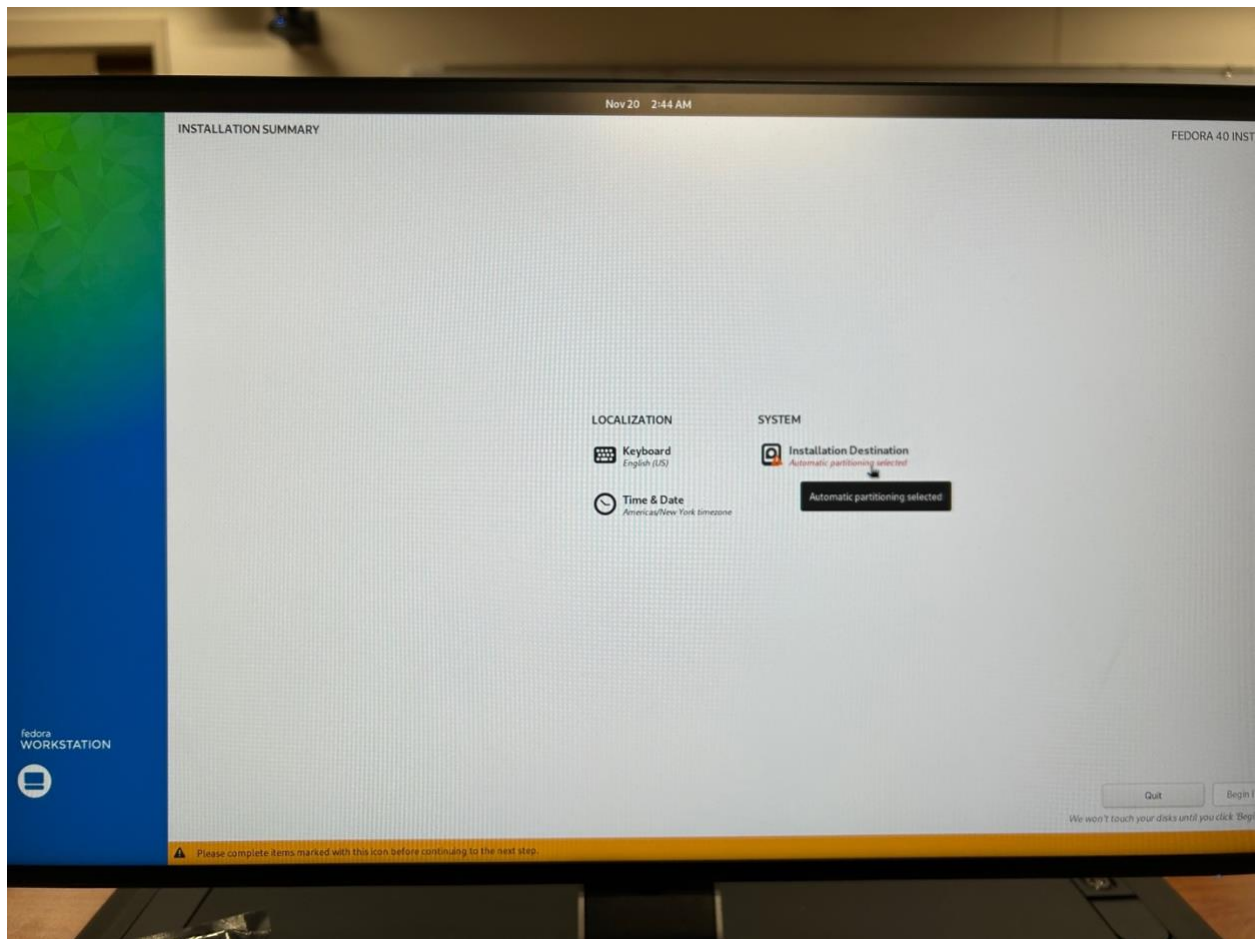

- First, create a bootable USB for Fedora.
- Once the bootable is created, restart the computer and repeatedly click F12 to open the BIOS settings.

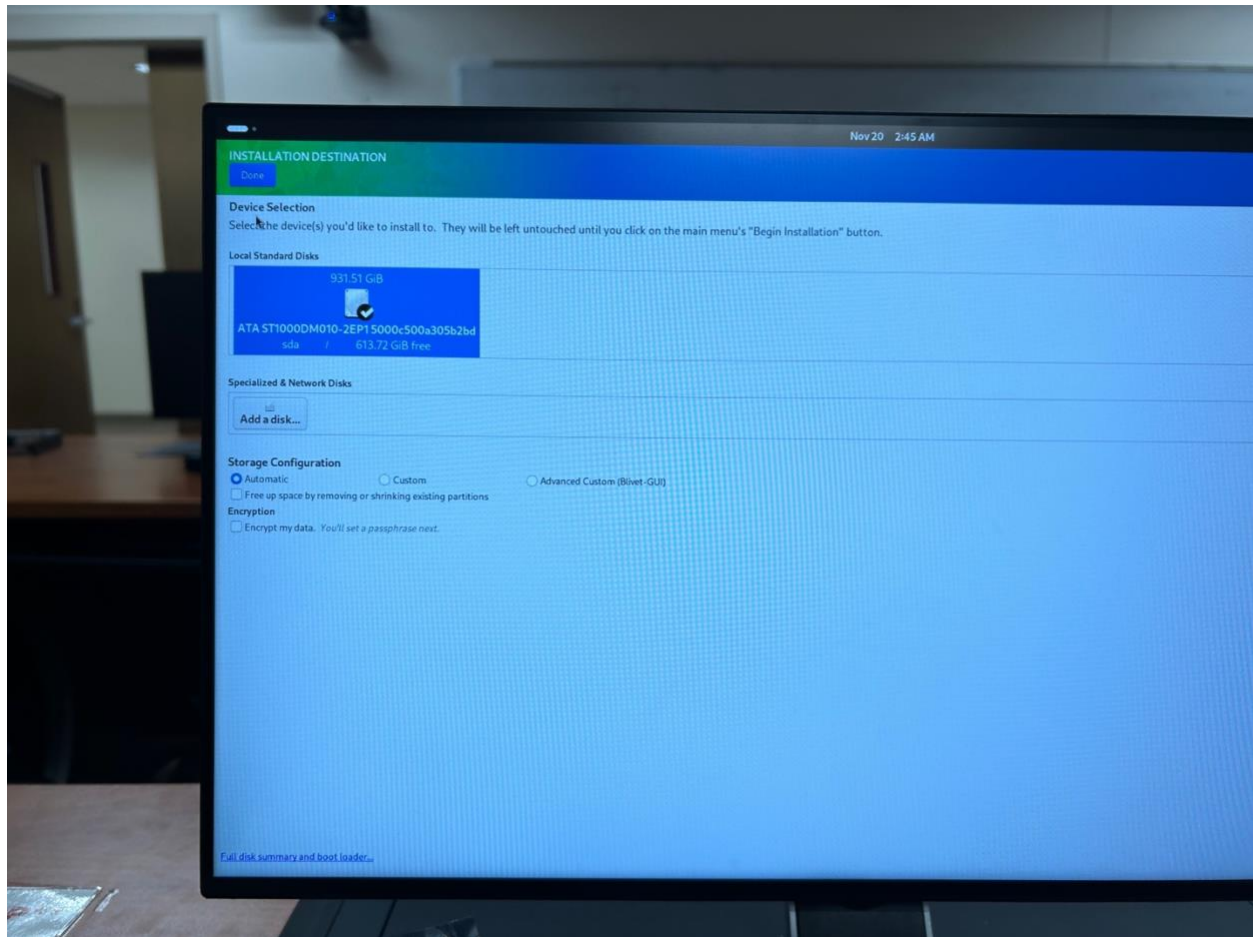

- Select the USB with the Fedora file. In this case it is UEFI: VendorC ProductCode 3.0.
- Once selected Fedora OS will begin.

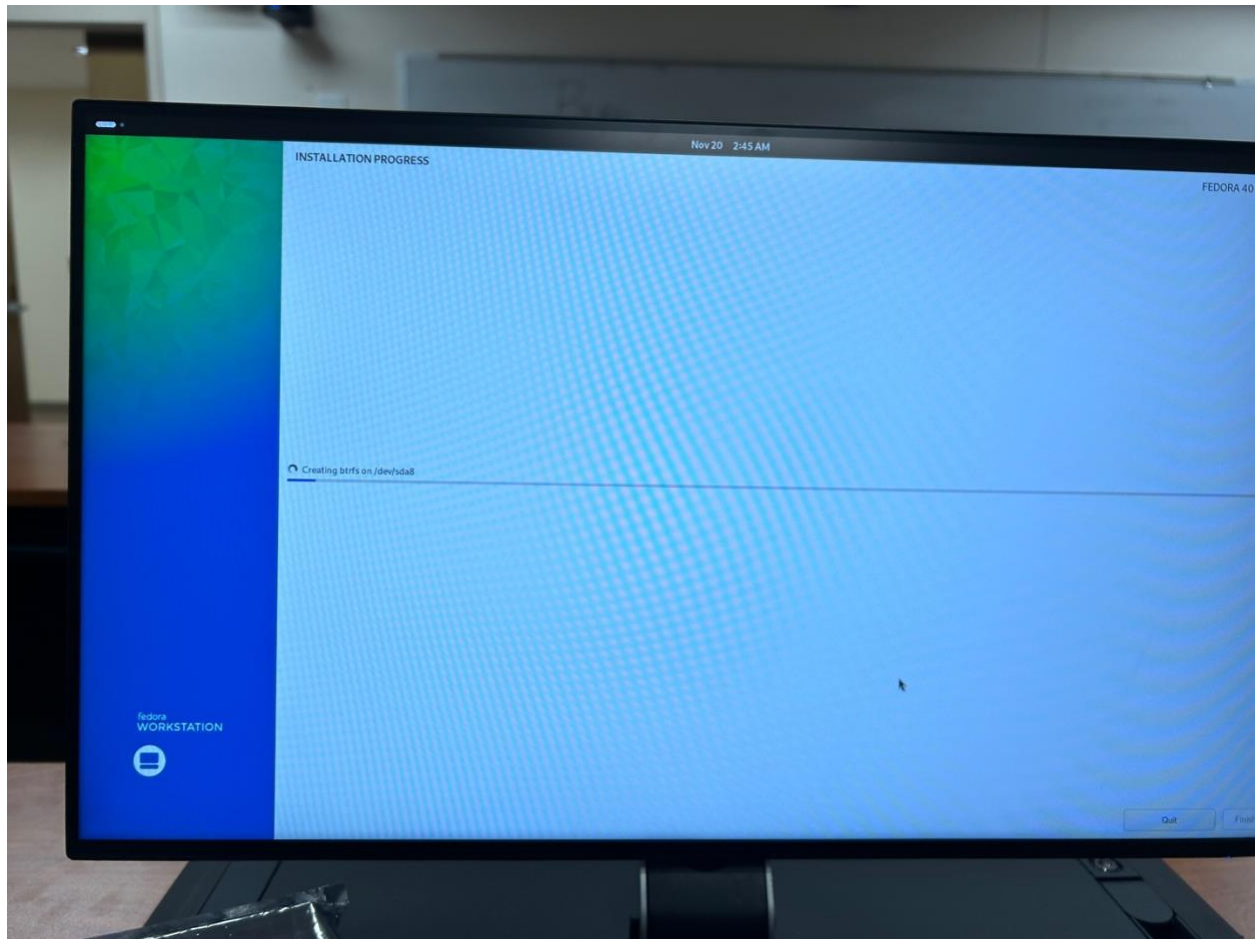

- Install Fedora

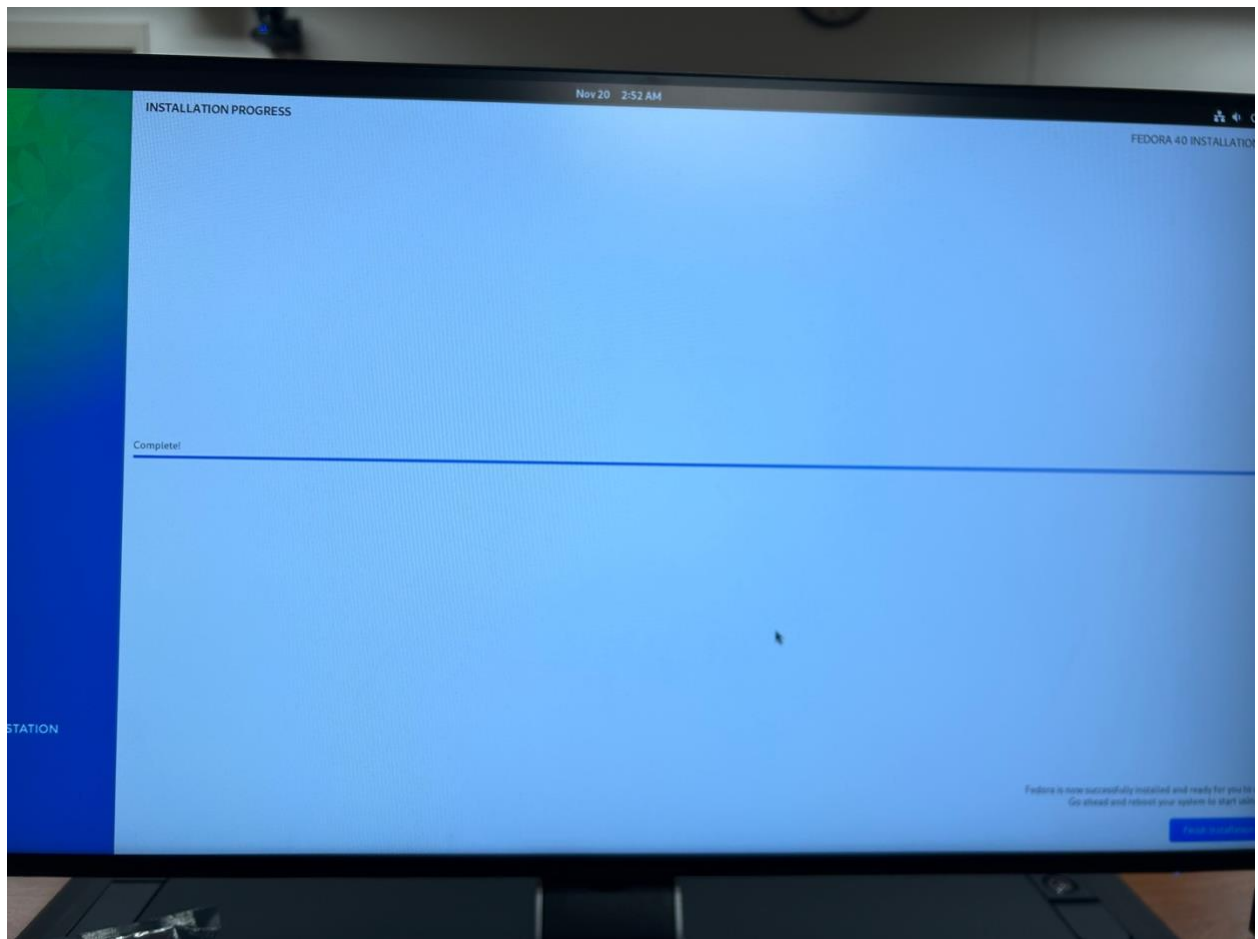

- Select the Installation Destination, which is the hard drive you have inserted into the computer.
- Then select begin.

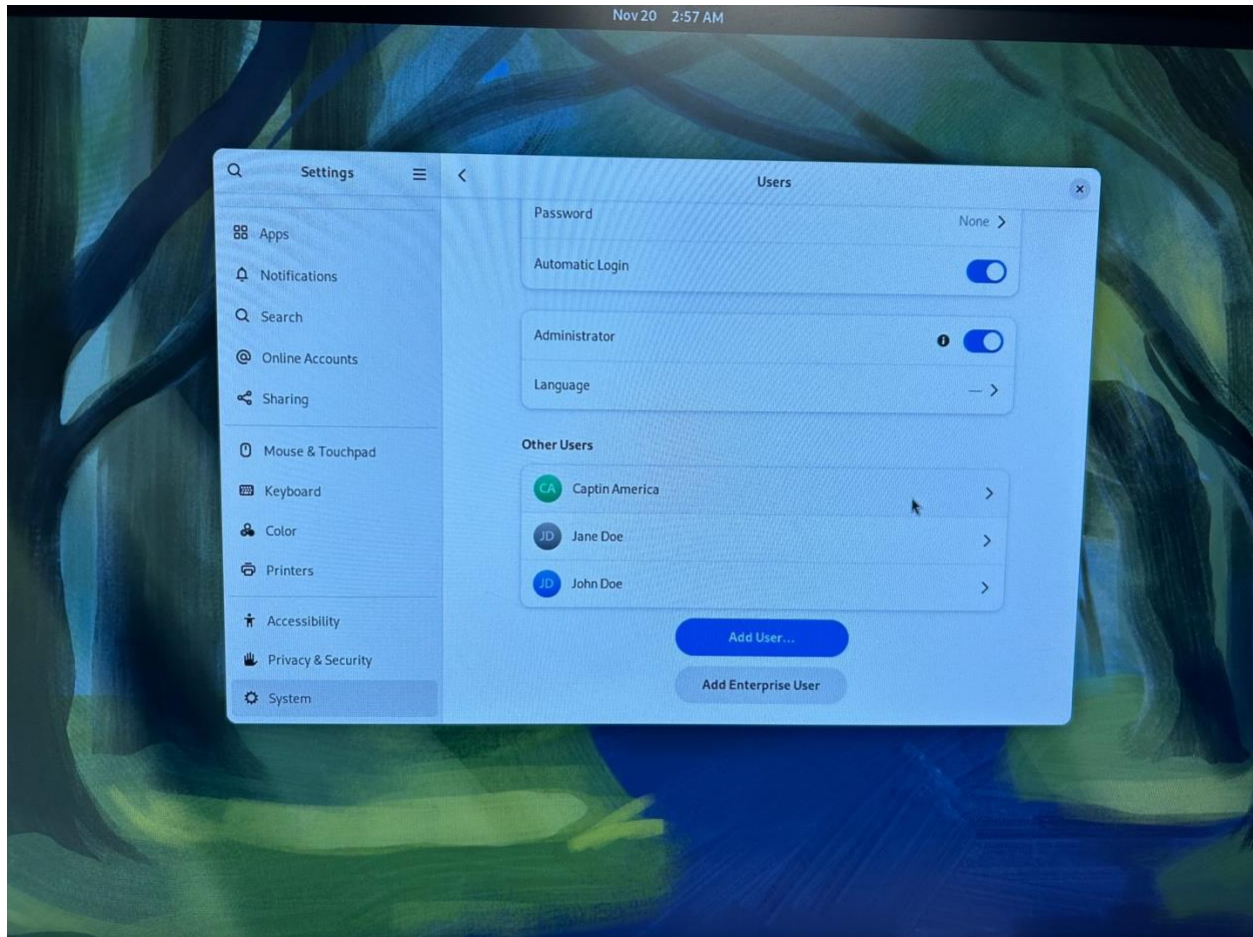

- Select the hard drive disk and then select done.

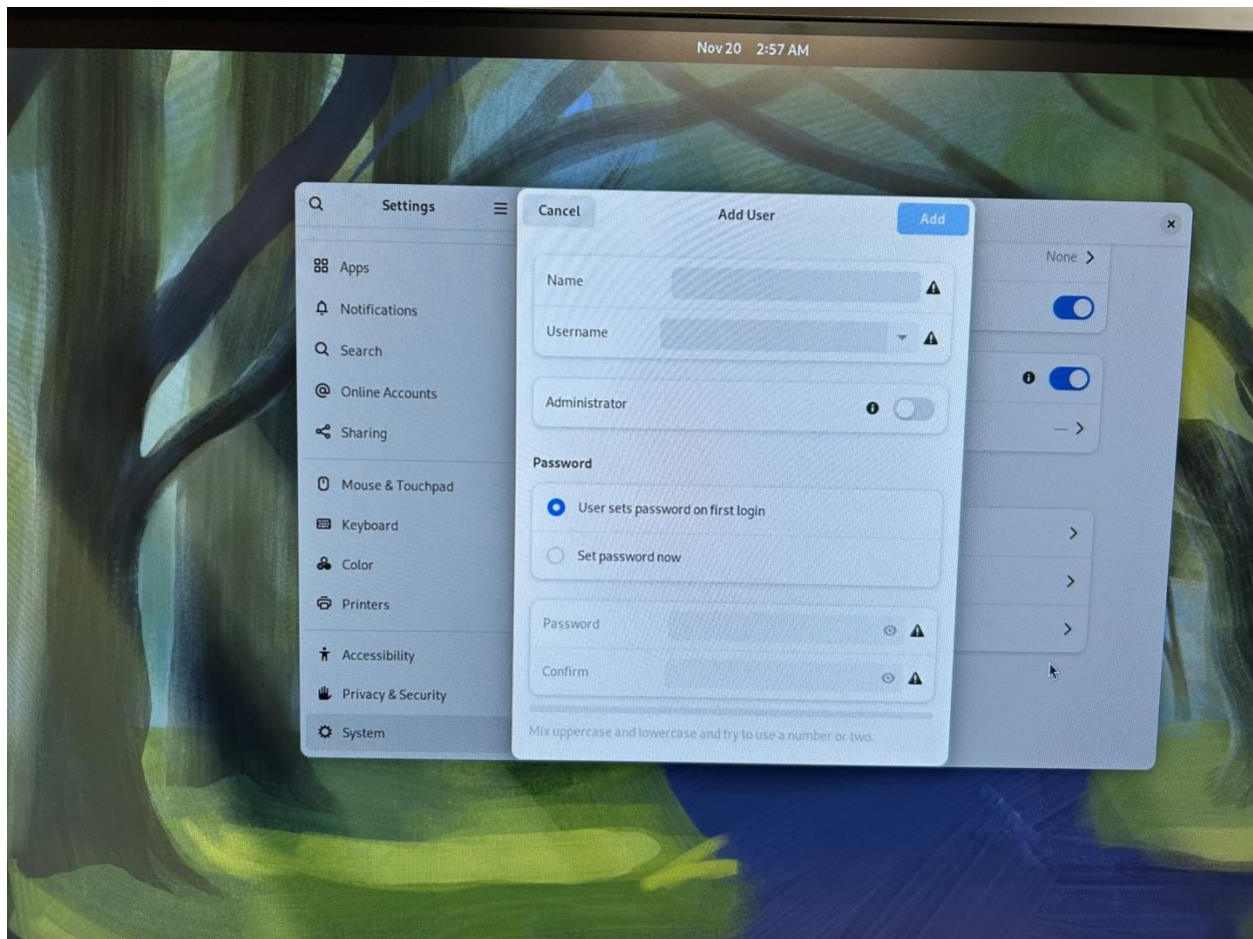

- Fedora OS will begin to install.

- Fedora OS is done installing. Select finish installing.

- Creating three additional user accounts.
- Select add user button.

- To create an additional admin account, click the Administrator button to on.
- To create two standard user accounts, enter information in and DO NOT select the Administrator button.
- This completes the installation process for the Fedora Operating System.
