Lab 1 - Operating System Dual Boot Documentation

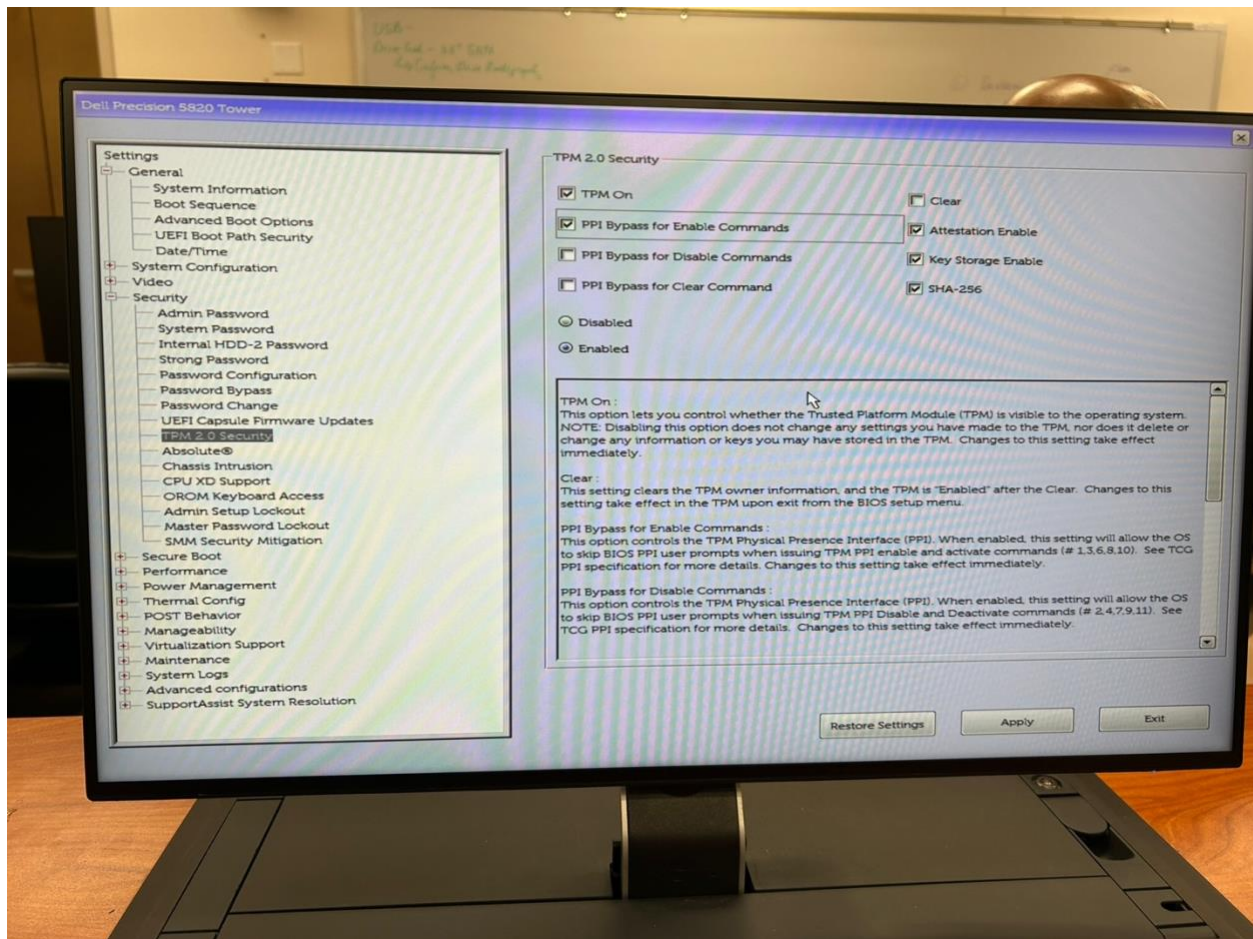

Operating System: Windows 11

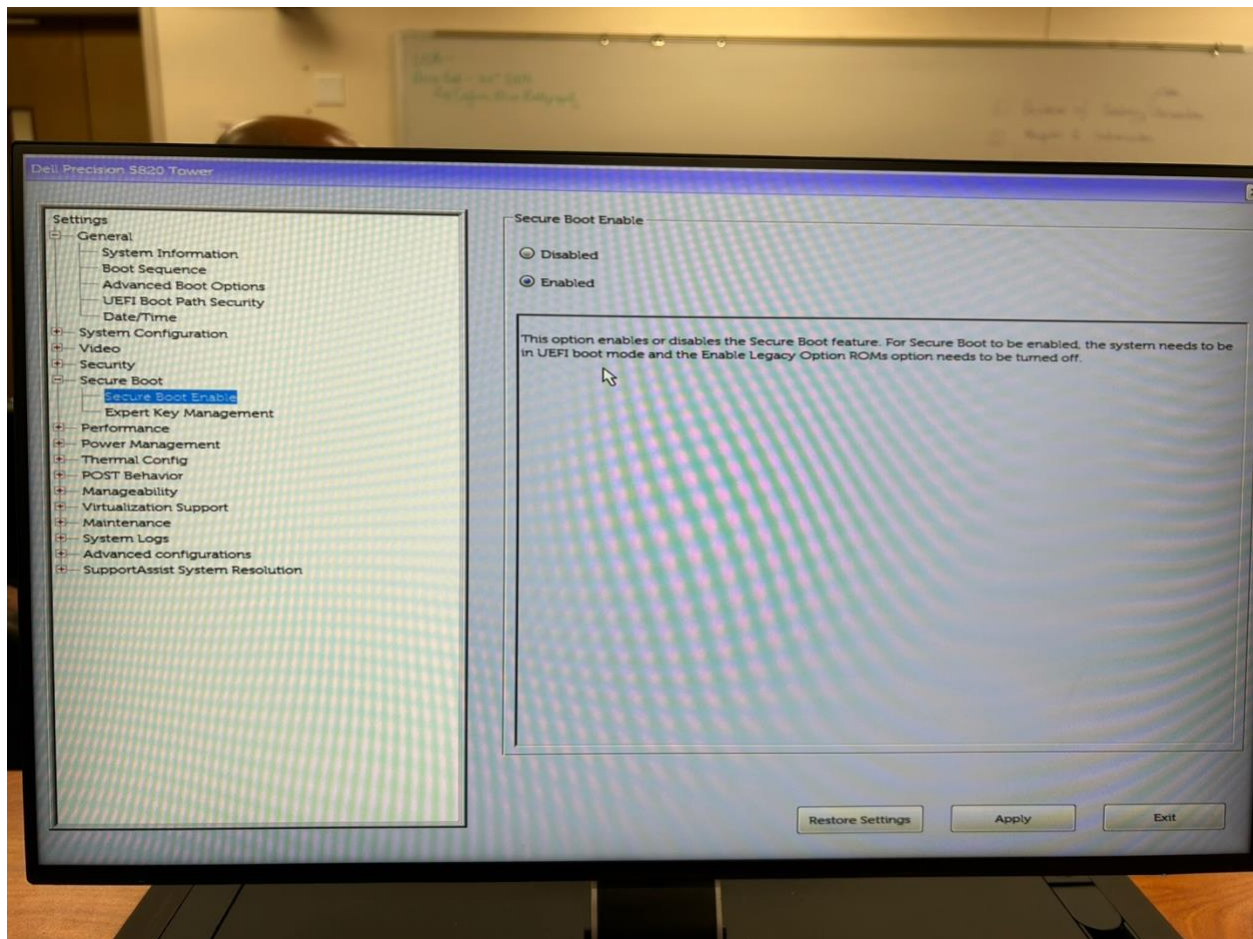

Creating a Windows 11 bootable with Rufus 4.5.2180 that was installed on a 128GB USB Flash Drive.

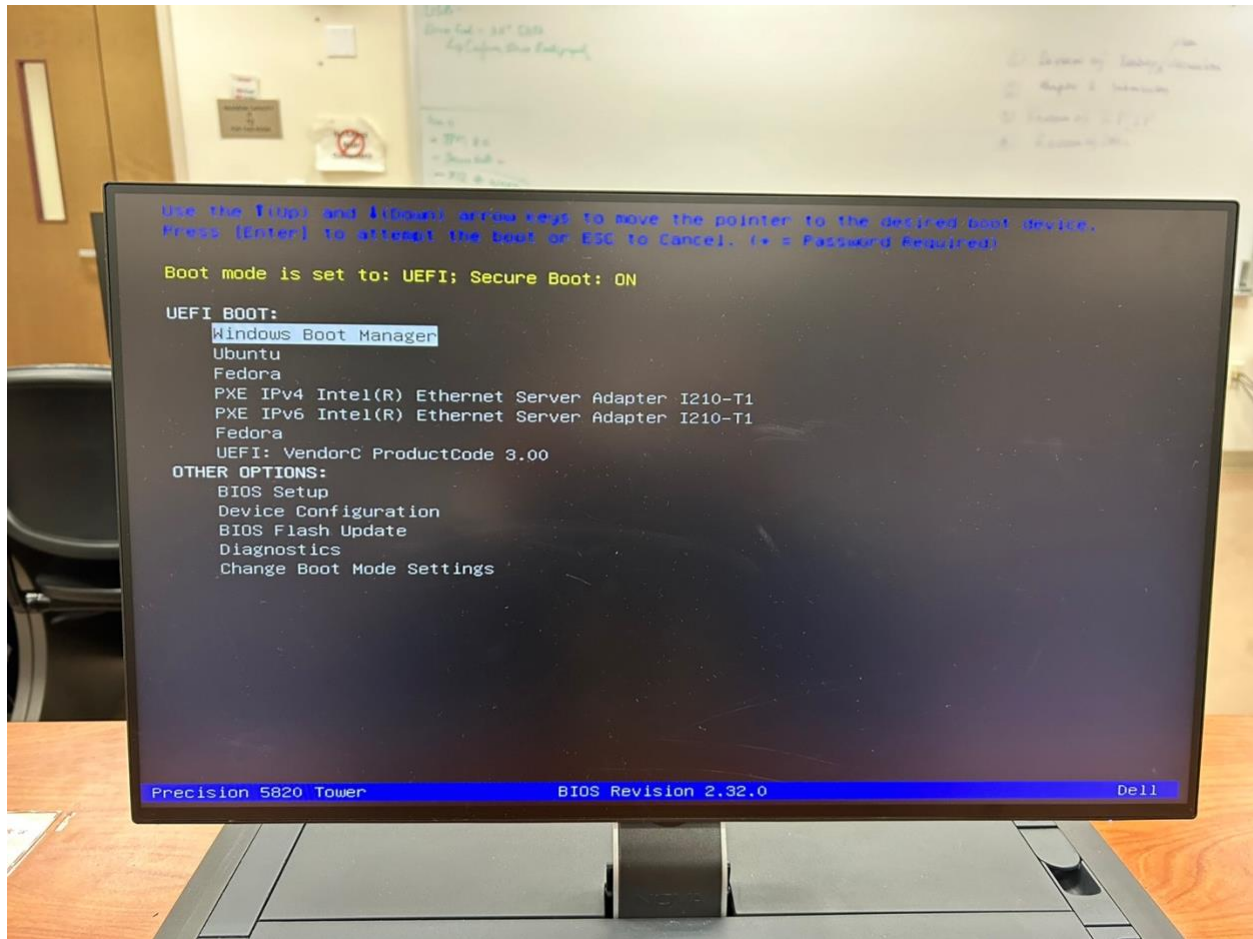

Once inserting the 1TB Internal hard drive and USB flash drive, I clicked the key F12 rapidly until the BIOS settings appeared. Ensured that secure boot was on.

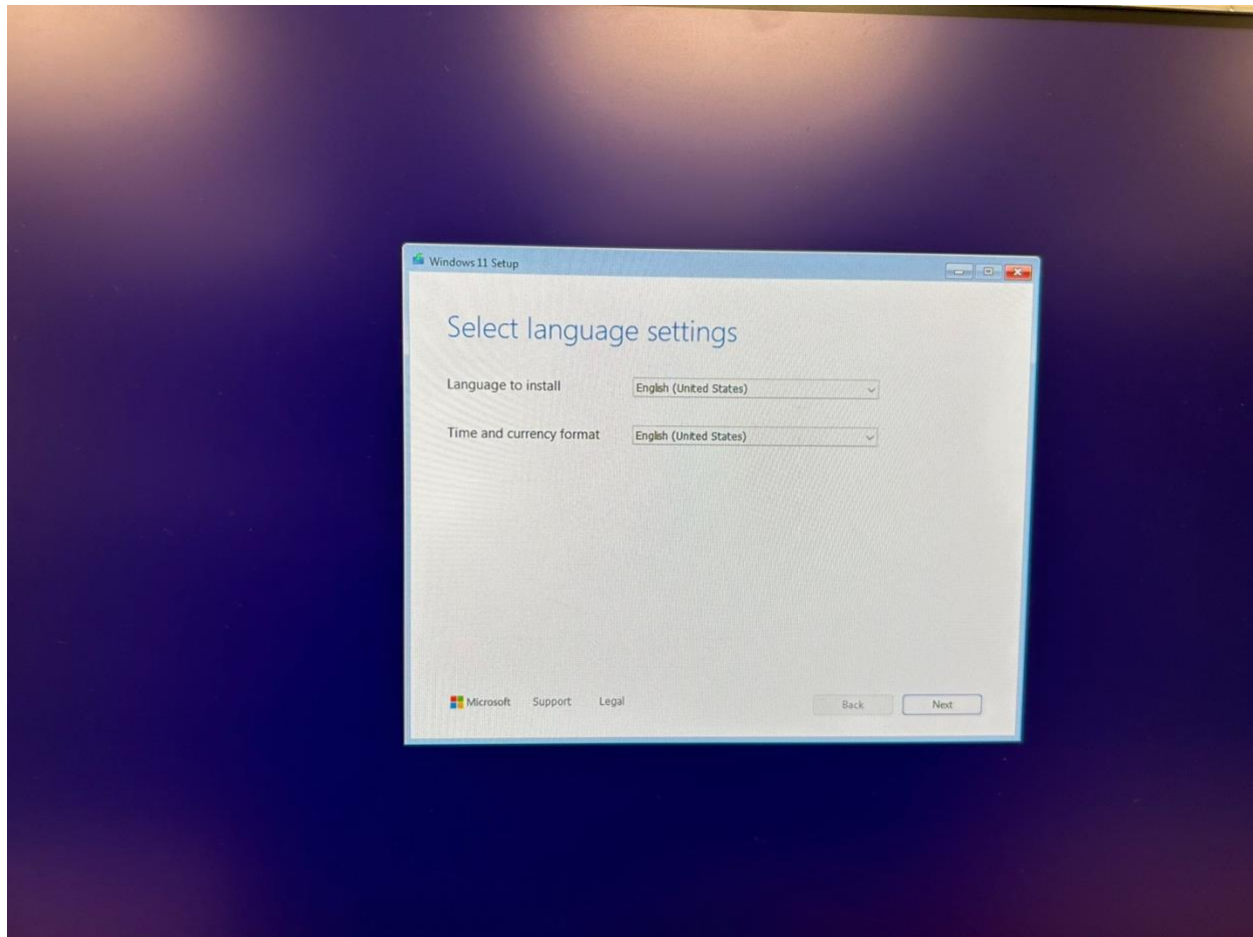

In the BIOS settings under the “Security” section, click “TPM 2.0 Security”. Once under the section then select “TPM” and “PPI Bypass for Enable Commands” as on.

Then underneath Secure boot tab, select “Secure Boot Enable.” Once selected click enabled. Save changes and exit.

Once the TPM and Secure boot features are enabled then return to the BIOS settings. Under UEFI BOOT select the USB flash drive that contains the Windows 11 bootable. In this case, my USB was named UEFI: VendorC ProductCode 3.00.

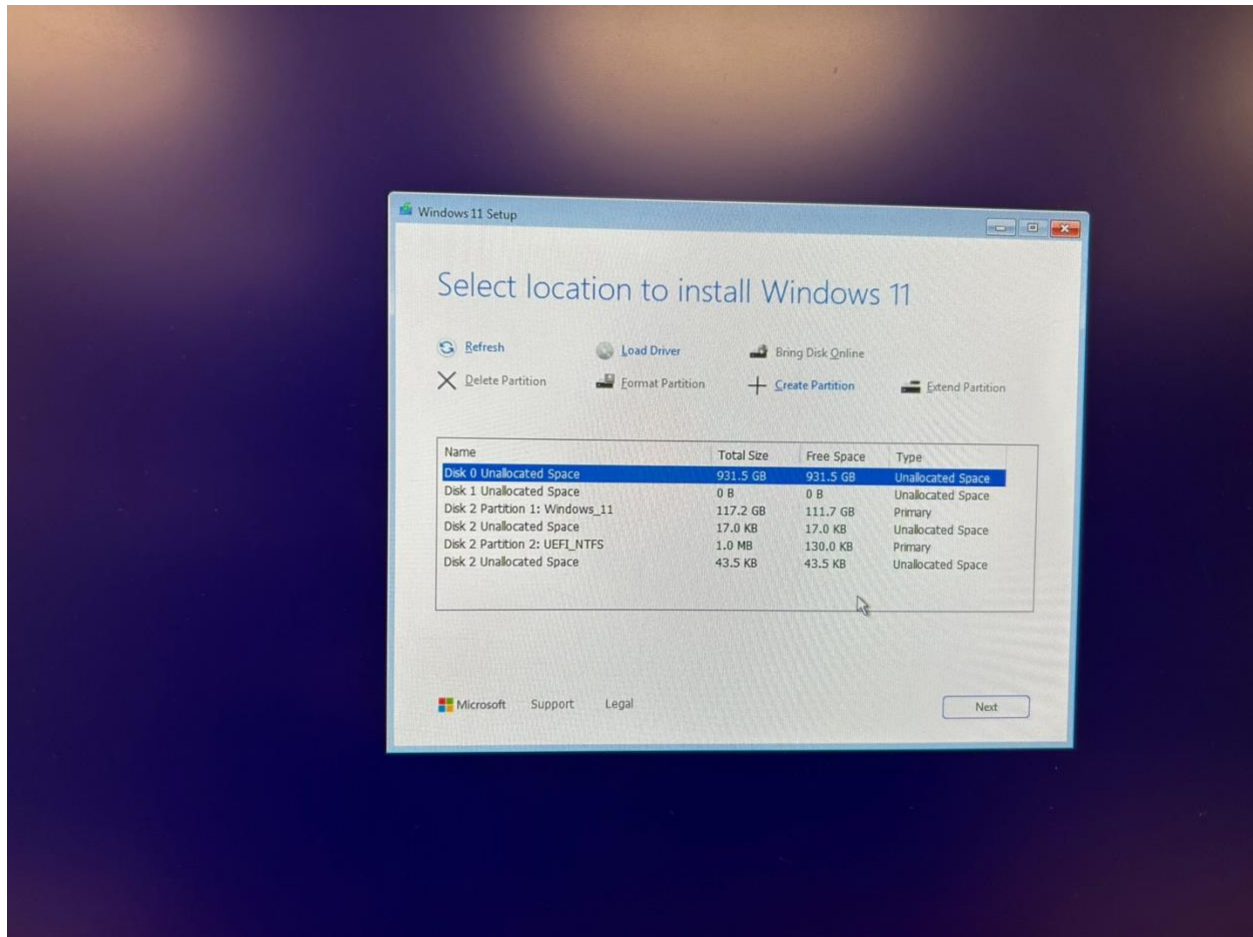

Windows 11 start up process will begin. Starting with selecting a language.

Certain requirements for the install include:

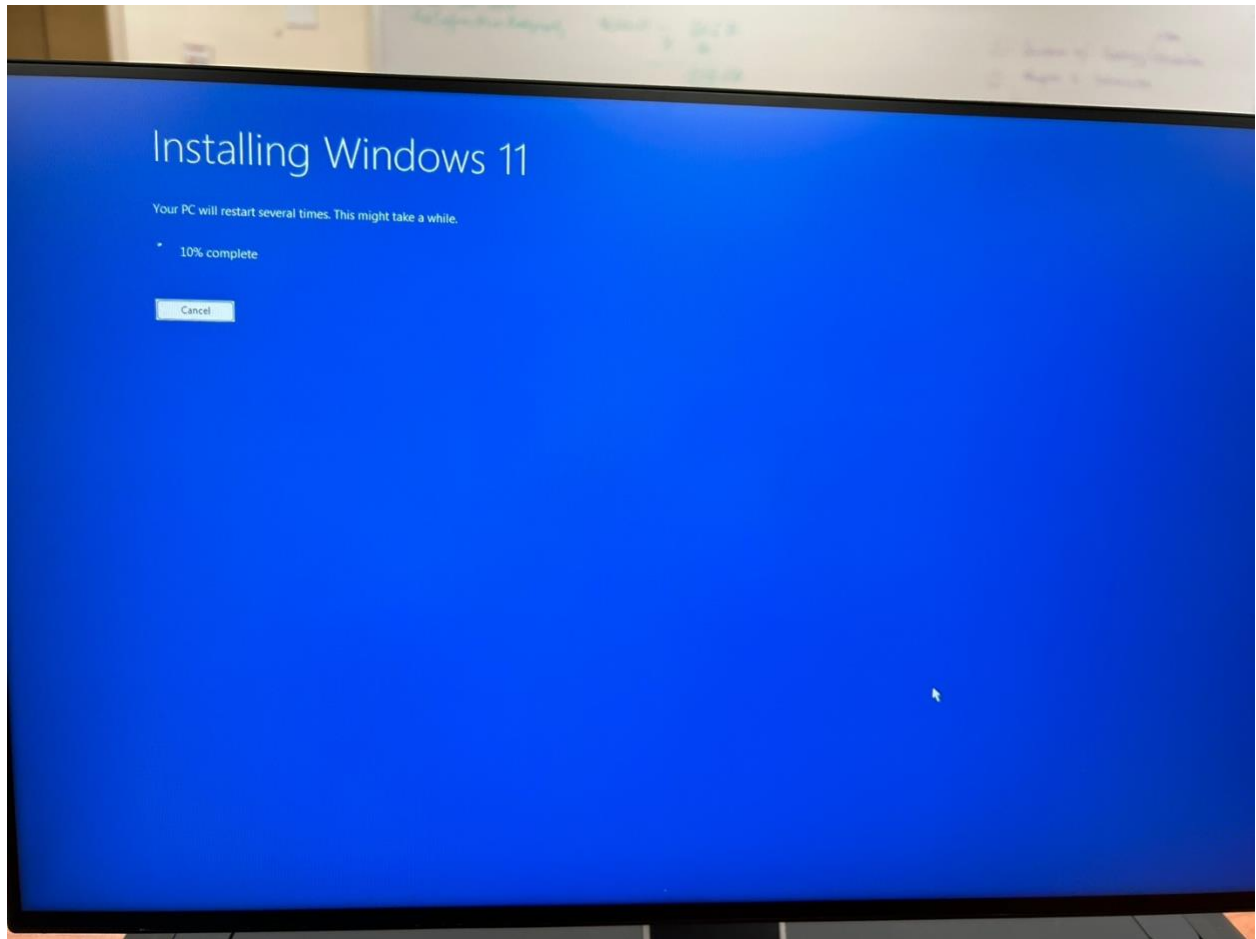

Selecting "I do not have product key."

Image Selection: "Windows 11 Pro"

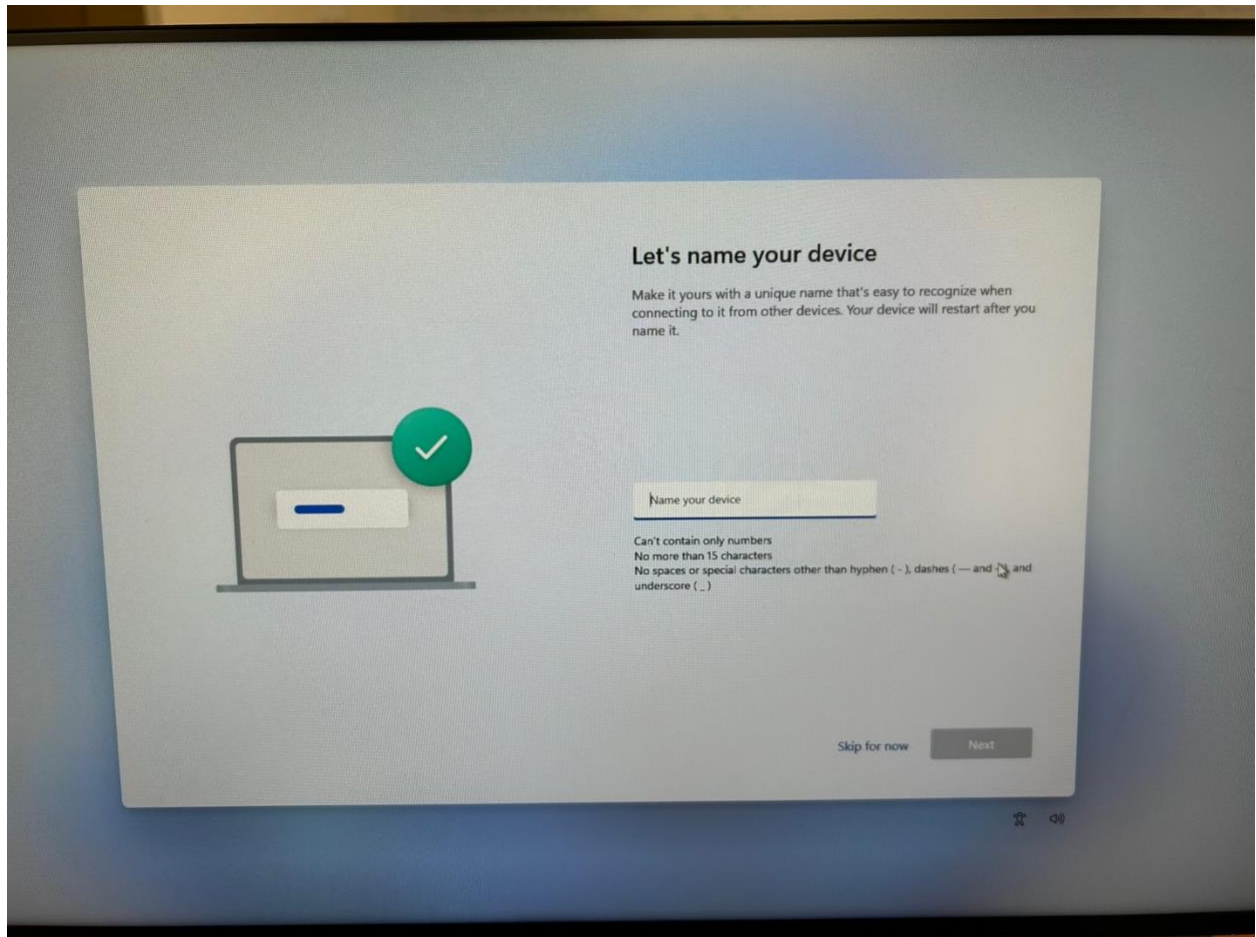

Then select "install Windows 11."

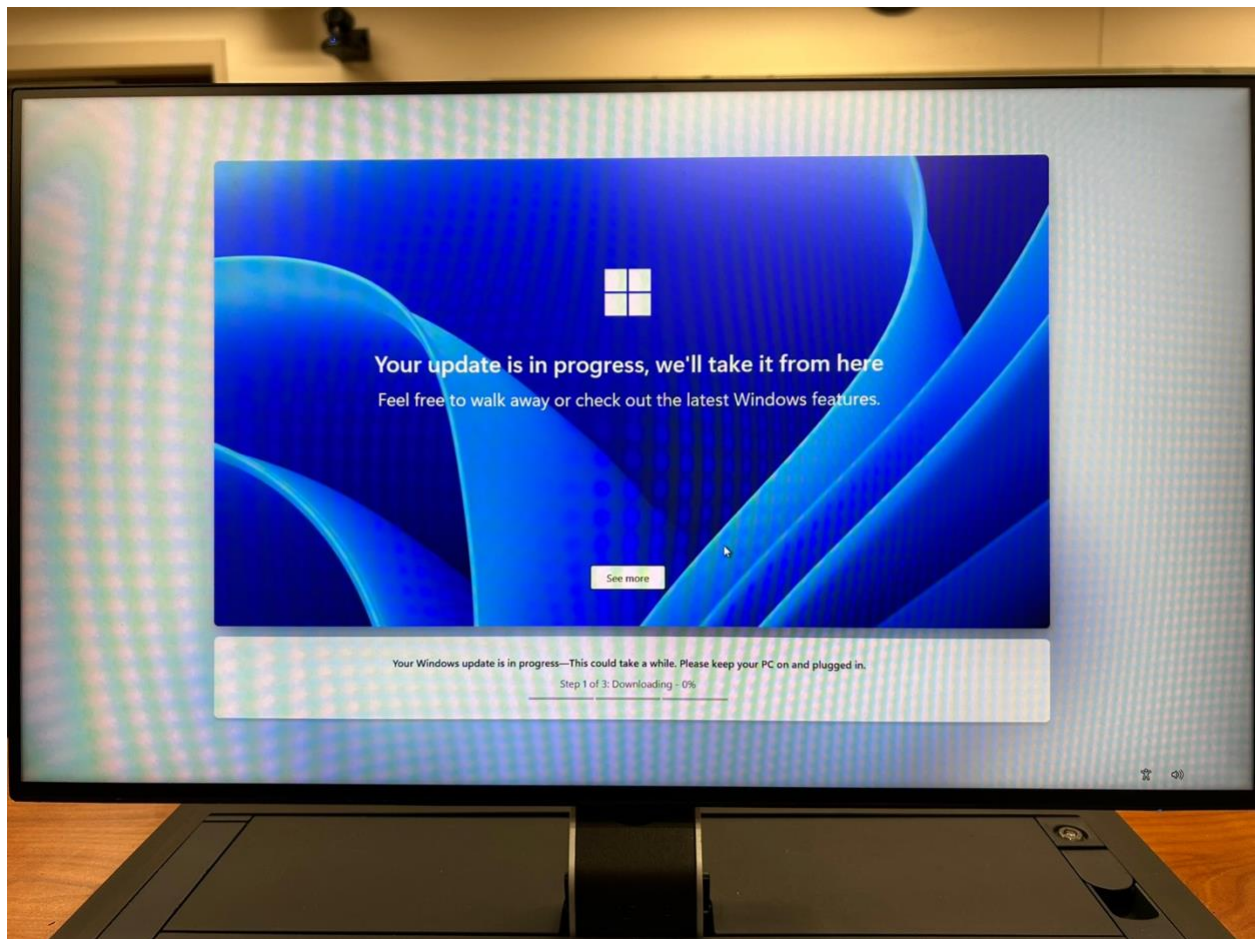

The next step is to partition the Hard Drive. In this case my hard drive is on “Disk 0 Unallocated Space.” The partition size I selected was 190GB but which creating a partition it must be in MB. The conversion was $190\text{GB} * 1024 = 194,560\text{MB}$ saved to disk 0.

Installation process of Windows 11 begins.

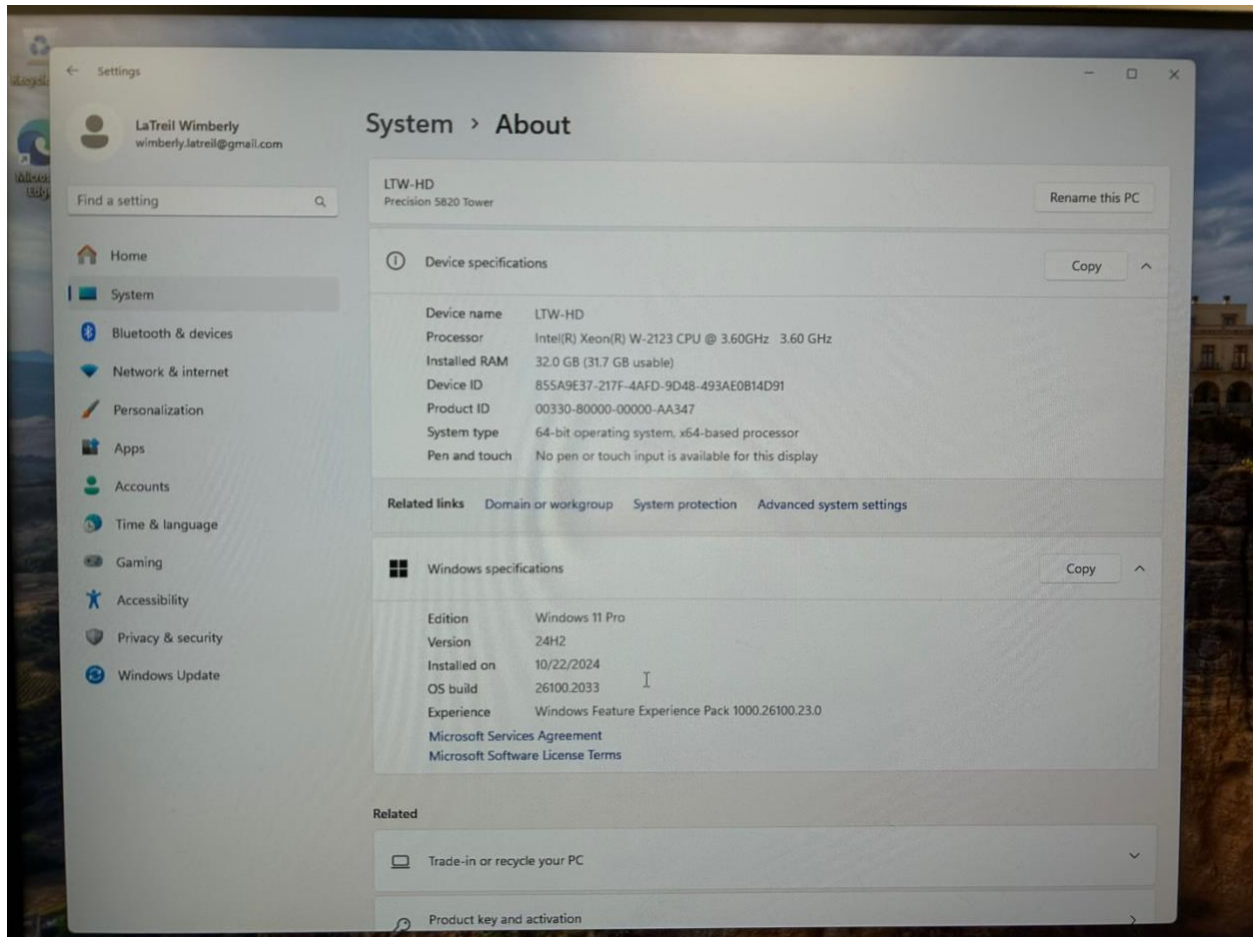

Name the device

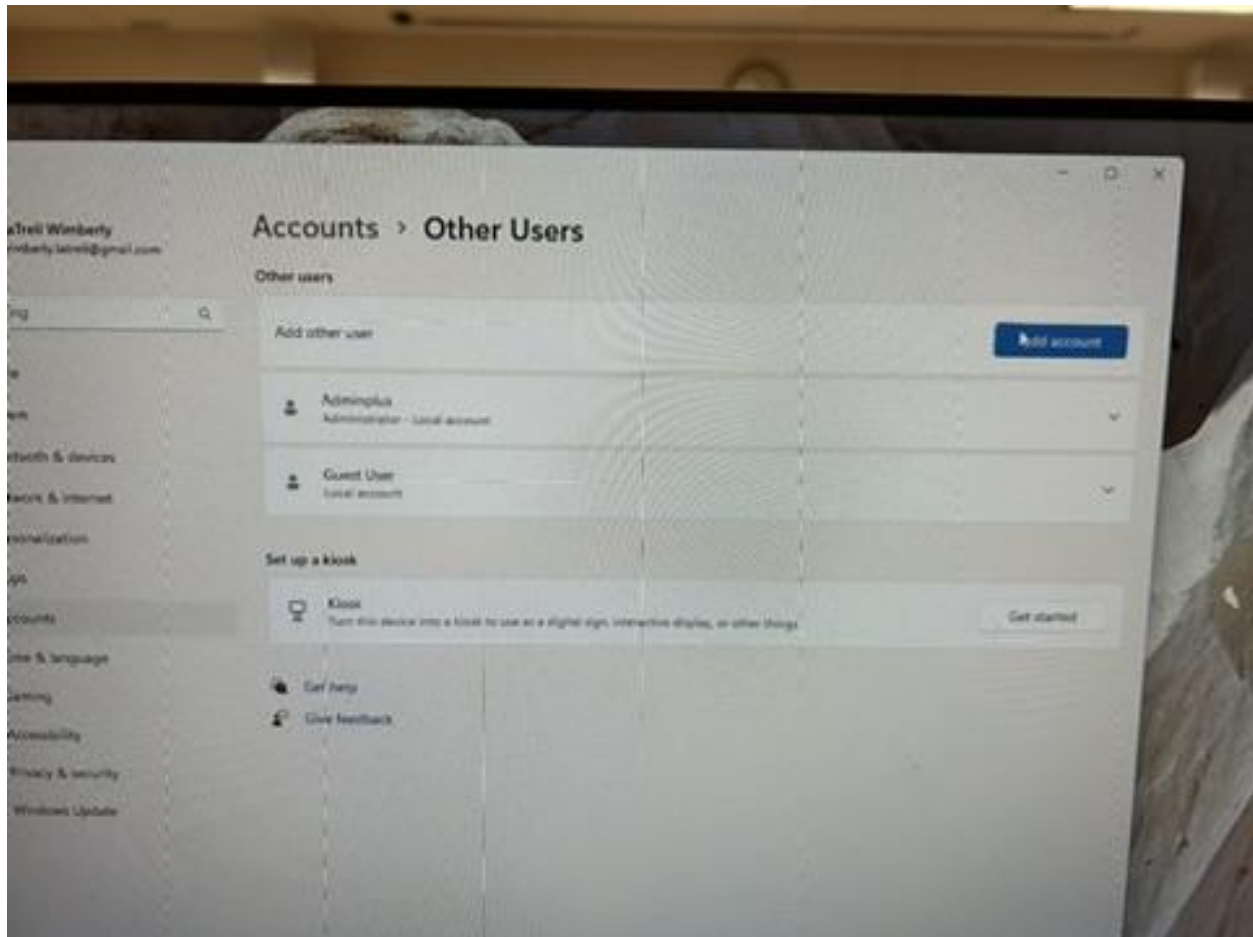

Windows 11 begins to update to the most recent version.

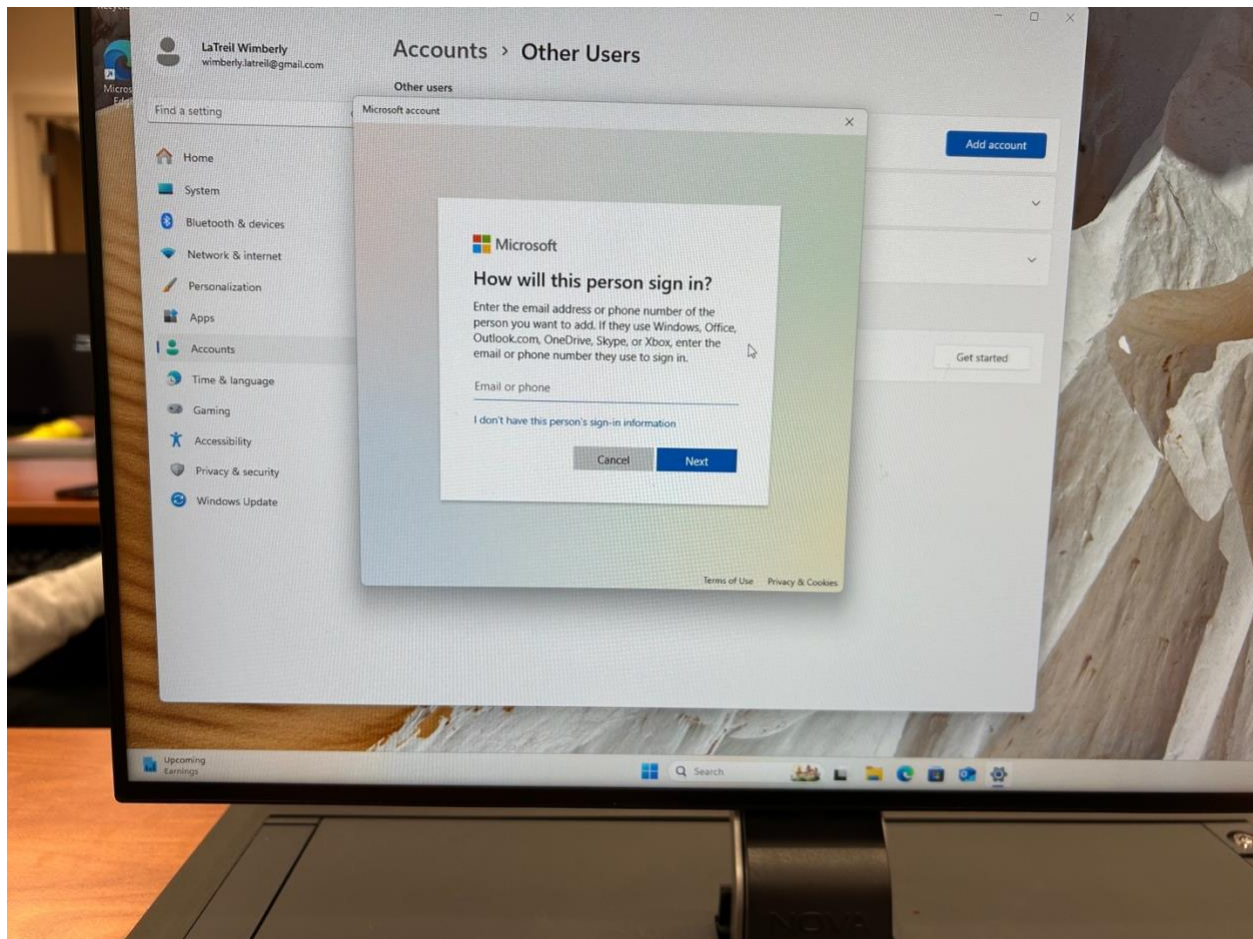

When Windows 11 completes the update, this is the interface

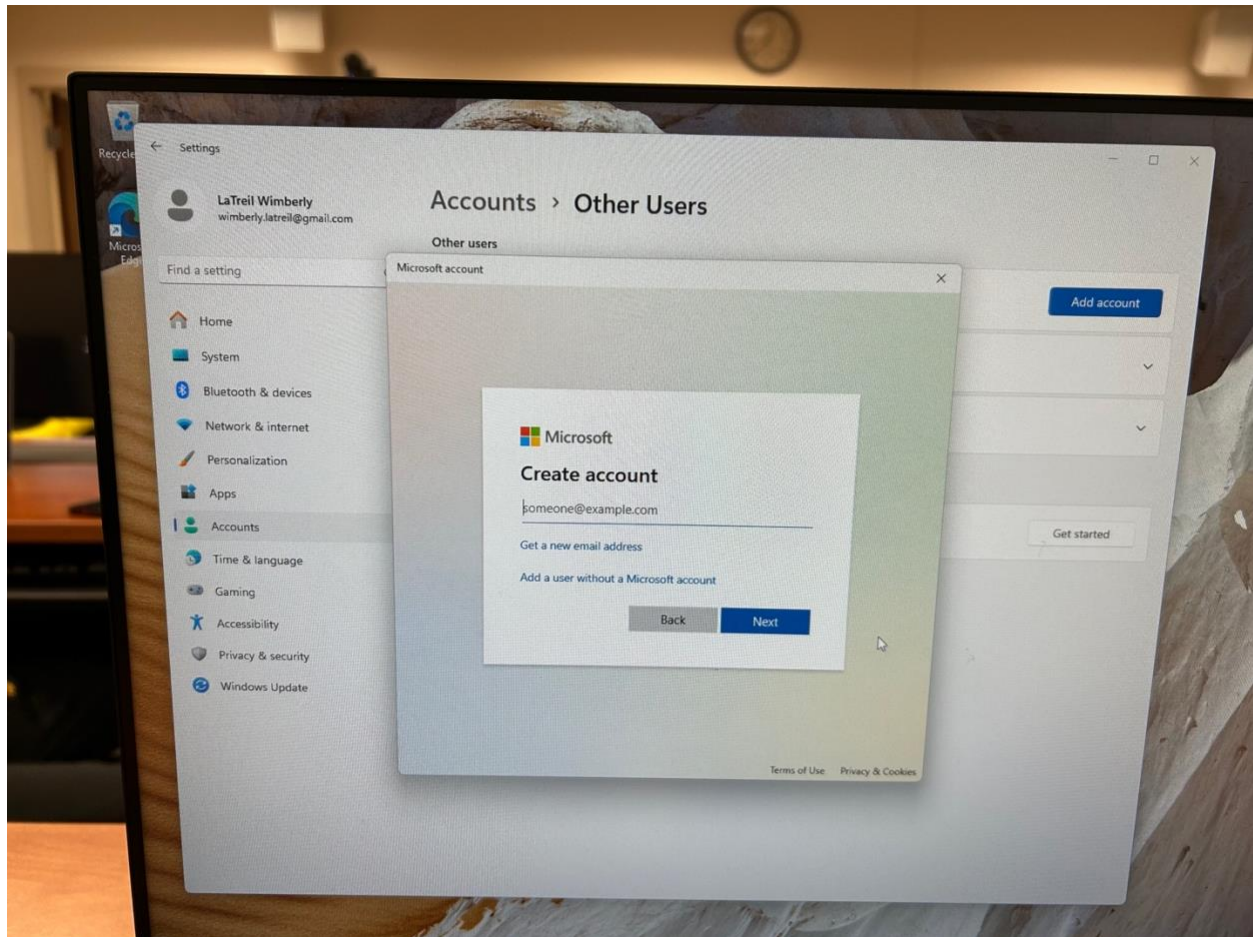

Checking the update for Windows 11 which should be OS build: 26100.2033.

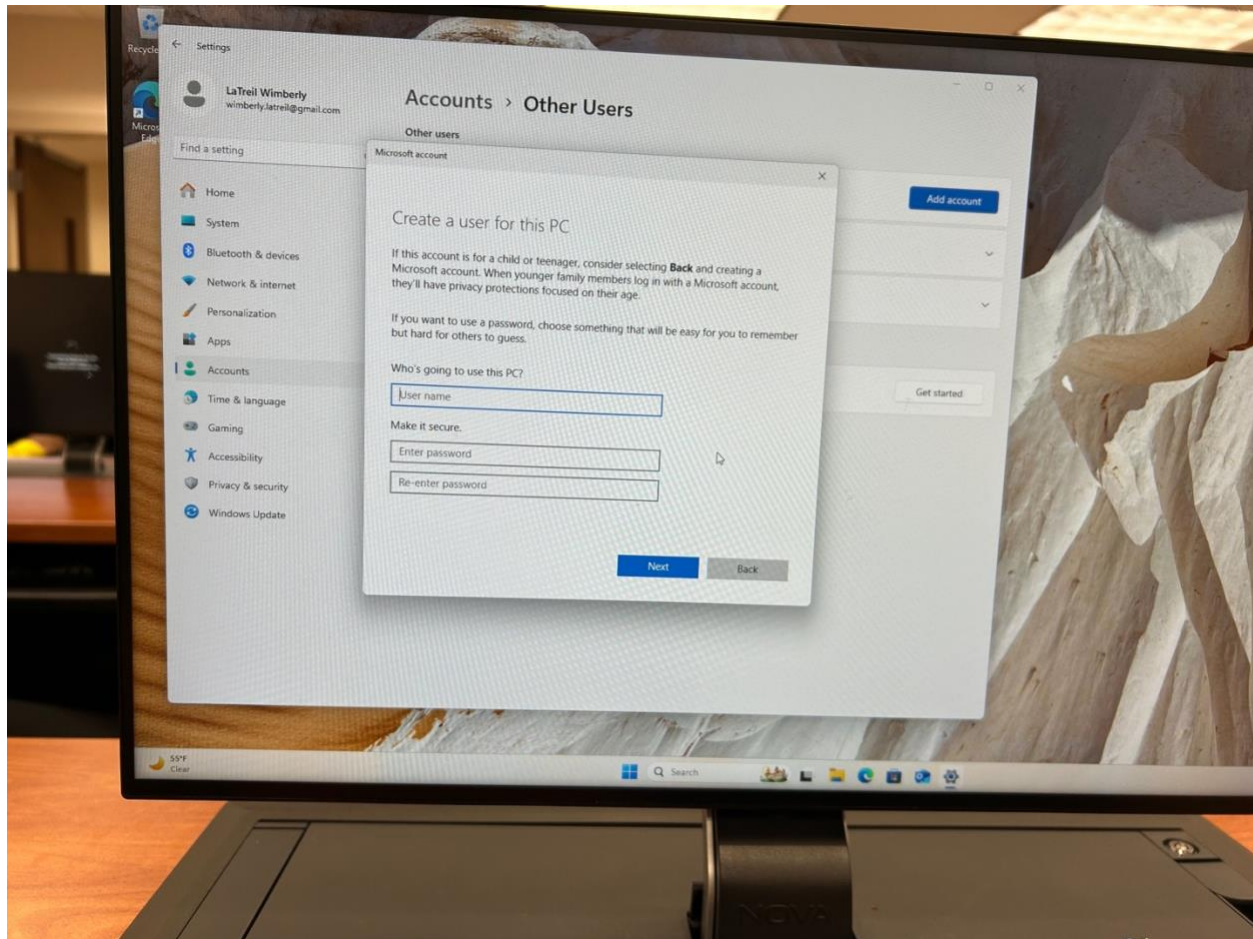

Creating two additional users in Windows 11 (another admin account, and a guest account(local)).
Select “add account”

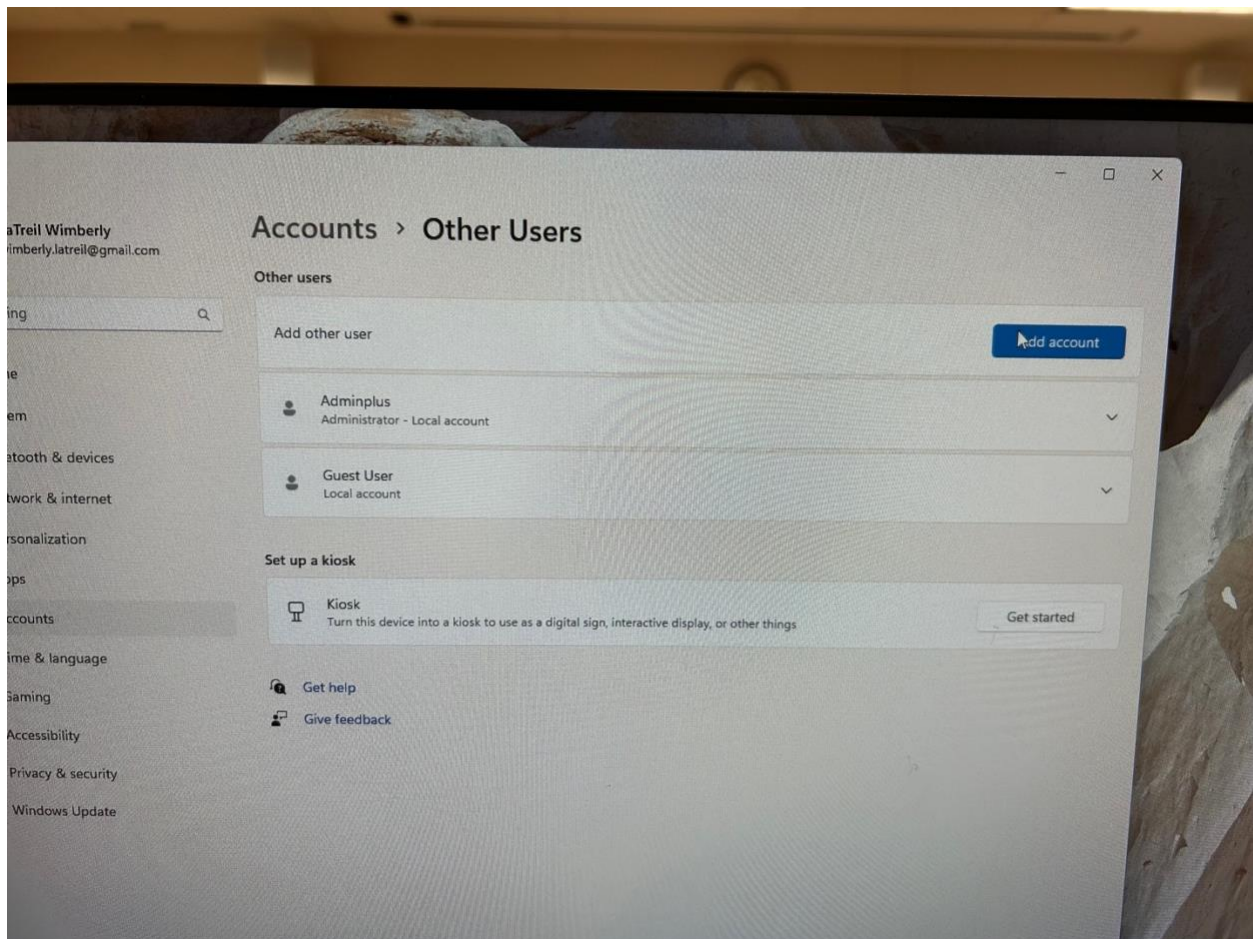

Select “I don’t have this person’s sign-in information”

Select “add a user without a Microsoft account”

Enter user names for the admin and guest user accounts.

Once accounts are created, select the admin account and change it from a local account to an administrator account.

Keep the guest user account as a local account.

This completes the final setup process for Windows 11.
